

South African Hospital Curtain Trial

Endurocide® Antimicrobial & Sporicidal Curtains were used in an ICU ward in a hospital in South Africa during the Coronavirus pandemic.

The curtains were independently screen tested and found to be free of COVID-19!

Testing method

Swabs were taken from Endurocide® Antimicrobial & Sporicidal Curtains being used in the ICU ward and independently screen tested by the hospital for the presence of Coronavirus nCoV-19 (COVID-19) using the Polymerase Chain Reaction (PCR) test method.

Please note: at time of testing, full laboratory tests to International Standards were not yet available. As such these results are screen tests and should be considered as indicative results
